Subject Index

Acoustic field
  high-decibel; adhesion and removal of particulate contaminants in, 133
Adhesion
  and removal of particulate contaminants in a high-decibel acoustic field, 133
Adsorption characteristics
  of dispersant; effect of, on flow and storage properties of coal–water mixtures, 277
Adsorption isotherms
  calculation of continuous pore size distributions from, 225
Alumina powders
  partially prewetted; granulation of — a new concept in coalescence mechanism, 19
Analytical–parametric theory
  of the random packing of particles, 171

Ball mill
  comparison of dry and wet fine grinding of coals in, 1
Bulk solids
  experimental study on vibrational transport of, 87

Calcium oxide–sulphur dioxide system
  pore closure model of reaction kinetics of, 75
Calculation of continuous pore size distributions from adsorption isotherms, 225
Clusters ejected from a fluidized bed
  measurement of flux of, 115
Coal
  cohesive: horizontal and inclined flow in transport plug flow of, 97
  comparison of dry and wet fine grinding of, in a ball mill, 1
Coalescence mechanism
  a new concept of, in granulation of partially prewetted alumina powders, 19
Coalescence model
  mathematical, in batch fluidized bed granulator, 35
Coal–water mixtures
  effect of adsorption characteristics of dispersant on flow and storage properties of, 277
  influence of particle size distribution of coal on fluidity of, 241
Comparison of dry and wet fine grinding of coals in a ball mill, 1
Consumption and wear rates
  and fineness of grind of metallic grinding media in tumbling mills, 231
Contaminants
  particulate, in a high-decibel acoustic field; adhesion and removal of, 133
Continuous pore size distributions
  calculation of, from adsorption isotherms, 225
Cryo-SEM method
  for observation of fine particles in aqueous suspension, 71

Divergence problem
  in calculating particle velocities in dilute dispersions of identical spheres;
    effect of a plane wall, 51
    sedimentation in a spherical container, 187
Dispersant
  effect of adsorption characteristics of, on flow and storage properties of coal–water mixtures, 277

Effect of adsorption characteristics
  of dispersant on flow and storage properties of coal–water mixtures, 277
Experimental study
  of transitional packed-bed flow in a standpipe, 223
  on vibrational transport of bulk solids, 87

Filtration vacuum
  low-turbulence flocculation as an aid to, 61
Fineness of grind
  and consumption and wear rates of metallic grinding media in tumbling mills, 231
Fines
  percolating, in coarse-particle fluidized beds; segregation mechanism of, 153
Fluidity of coal–water mixtures
  influence of particle size distribution of coal on, 241
Fluidized beds
  coarse-particle; segregation mechanism of percolating fines in, 153
  measurement of flux of clusters ejected from, 115
Fluidized-bed granulator
  batch; mathematical coalescence model in, 35
Flocculation
  low-turbulence; as an aid to vacuum filtration, 61
Flux of clusters
  ejected from a fluidized bed; measurement of, 115
Fundamental particle mixing studies
  in an agitated bed of granular materials in a cylindrical vessel, 107

Gas transfer
  between a central jet and a large two-dimensional gas-fluidized bed, 207
Gas-fluidized bed
  large two-dimensional; gas transfer between a central jet and, 207
Geometry for characterizing fractured particle shape, 285
Granular materials
  methods of calculation of vibrational transport rate of, 161

© Elsevier Sequoia/Printed in The Netherlands

particle mixing studies in an agitated bed of, in a cylindrical vessel, 107
Granulation
of partially prewetted alumina powders — a new concept in coalescence mechanism, 19
Granulation effectiveness
influence of material properties of iron ore sinter feed on, 141
Grinding
fine, dry and wet, of coals in a ball mill, 1
Grinding media in tumbling mills
fineness of grind and consumption and wear rates of, 231
Grinding mills
optimization of individual events during which breakages occur in, 247

Heat-exchanger
vibrofluidized-bed, for heat recovery from a hot gas, pilot-scale system;
feasibility study of, 257
heat-transfer evaluation of, 269

Influence of material properties of iron ore sinter feed
on granulation effectiveness, 141
Influence of particle size distribution of coal
on fluidity of coal–water mixtures, 241
Iron ore sinter feed
influence of material properties of, on granulation effectiveness, 141

Low-turbulence flocculation
as an aid to vacuum filtration, 61

Magnetically frozen beds, 127
Mathematical coalescence model
in a batch fluidized bed granulator, 35
Measurement of flux of clusters
ejected from a fluidized bed, 115
Mercury porosimetry
of ordered sphere compacts: investigation of intrusion and extrusion pore size distributions, 193
Method for observation
of fine particles in aqueous suspension by cryo-SEM, 71
Methods of calculation
of vibrational transport rate of granular materials, 161
Mixing of particles
in an agitated bed of granular materials in a cylindrical vessel, 107

Optimization of individual events in grinding mills during which breakages occur, 247

Particle mixing studies
in an agitated bed of granular materials in a cylindrical vessel, 107
Particles
analytical–parametric theory of random packing of, 171
fine, in aqueous suspension; method for observation of, by cryo-SEM, 71
Particle shape
fractured; geometry for characterizing, 285
Particle size distribution
of coal; influence of, on fluidity of coal–water mixtures, 241
Particle velocities
in dilute dispersions of identical spheres, divergence problem in calculation of, 187
in dilute dispersions of identical spheres: effect of a plane wall on calculation of, 51
Particulate contaminants
in a high-decibel acoustic field, adhesion and removal of, 133
Plug flow transport
of cohesive coal: horizontal and inclined flow, 97
Pore closure model
of reaction kinetics of SO_2–CaO system, 75
Pore size distributions
continuous; calculation of, from adsorption isotherms, 225
intrusion and extrusion, of ordered sphere compacts: investigation of, by mercury porosimetry, 193
Powder
size reduction of magnetic sand to, in a laboratory vibration mill, 11
Powders
alumina, partially prewetted, granulation of — a new concept in coalescence mechanism, 19

Random packing of particles
analytical–parametric theory of, 171
Reaction kinetics
of SO_2–CaO system — pore closure model, 75

Sand
magnetic; size reduction to nanometre powder in a laboratory vibration mill, 11
Segregation mechanism
of percolating fines in coarse-particle fluidized beds, 153
Size reduction
of magnetic sand to nanometre powder in a laboratory vibration mill, 11
Standpipe
experimental study of transitional packed bed flow in, 223
Sulphur dioxide–calcium oxide system
pore closure model of reaction kinetics of, 75

Transitional packed bed flow
in a standpipe, experimental study of, 223
Transport
vibrational, of bulk solids; experimental study on, 87
Transport plug flow
of cohesive coal: horizontal and inclined flow, 97
Tumbling mills
fineness of grind and consumption and wear rates of metallic grinding media in, 231

Vacuum filtration
low-turbulence flocculation as an aid to, 61
Vibration mill
laboratory; size reduction of magnetic sand to nanometre powder in, 11
Vibrational transport
of bulk solids, experimental study on, 87
Vibrational transport rate
of granular materials, methods of calculation, 161
Vibrofluidized-bed heat-exchanger
for heat recovery from a hot gas, 257, 269
Wear and consumption rates
and fineness of grind of metallic grinding media in tumbling mills, 231
